

# Aurora: A Foundation Model for the Earth System

**Wessel Bruinsma**

**Microsoft Research AI for Science**

**Building a Dutch AI-Earth System Modeling Community  
KNMI, De Bilt, 29 Jan 2025**

# The Aurora Team

**Paris Perdikaris**

University of Pennsylvania,  
formerly MSR

**Wessel Bruinsma**

MSR

**Megan Stanley**

MSR

**Ana Lučić**

University of Amsterdam,  
formerly MSR

**Cristian Bodnar**

Silurian, formerly MSR

**Richard Turner**

University of Cambridge,  
formerly MSR

**Anna Vaughan**

University of Cambridge

**Johannes Brandstetter**

JKU Linz, NXAI, formerly MSR

**Patrick Garvan**

Formerly MSR

**Maik Riechert**

MSR

**Max Welling**

University of Amsterdam,  
CuspAI, formerly MSR

**Elizabeth Heider**

Book tour, formerly MSR

# The AI Revolution in Science

AlphaFold  
Protein folding

7PNM

Ground truth shown in gray

# The AI Revolution in Weather Forecasting

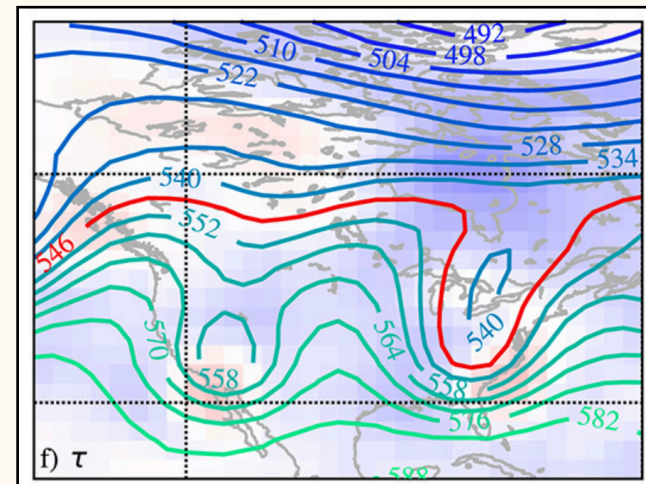

2018

First serious efforts to compare AI models to physics baselines

Dueben and Bauer (2018)

2019

AI models skillful to multiple days

Weyn et al. (2019)

2020

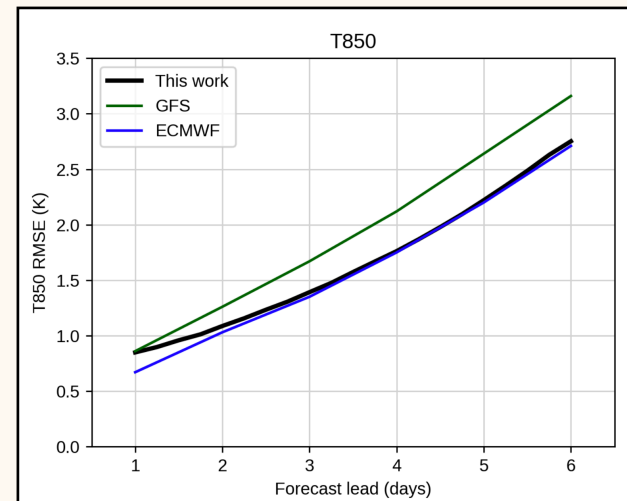

WeatherBench starts to drive ML development

Rasp et al. (2018)

# The AI Revolution in Weather Forecasting

2022

GNN outperforms GFS at  $1^\circ$

Keisler (2022)

2022

Pangu-Weather outperforms HRES at  $0.25^\circ$

Bi et al. (2023)

# The AI Revolution in Weather Forecasting

2022–2023

Tech companies start to work in this space

2023

GenCast outperforms IFS ensemble  
Price et al. (2024)

2024

ECMWF launches AIFS

# What About Other Forecasting Tasks?

Air  
pollution

Atmospheric  
composition

Waves

Sea ice

Ocean

- Current models are impressive, but **limited to one setting**.
- Unified approach?

# Aurora

## pretraining

- Train a single neural network a *large* body of Earth system data
- Learn general-purpose representation of dynamics that govern atmospheric and oceanic flow
- Slow and data hungry

## fine-tuning

- Leverage learned representation to **efficiently adapt to new domains!**
- Fast and data efficient

Aurora: a **foundation model** for the Earth system

# Aurora

## Fine-Tuning Applications

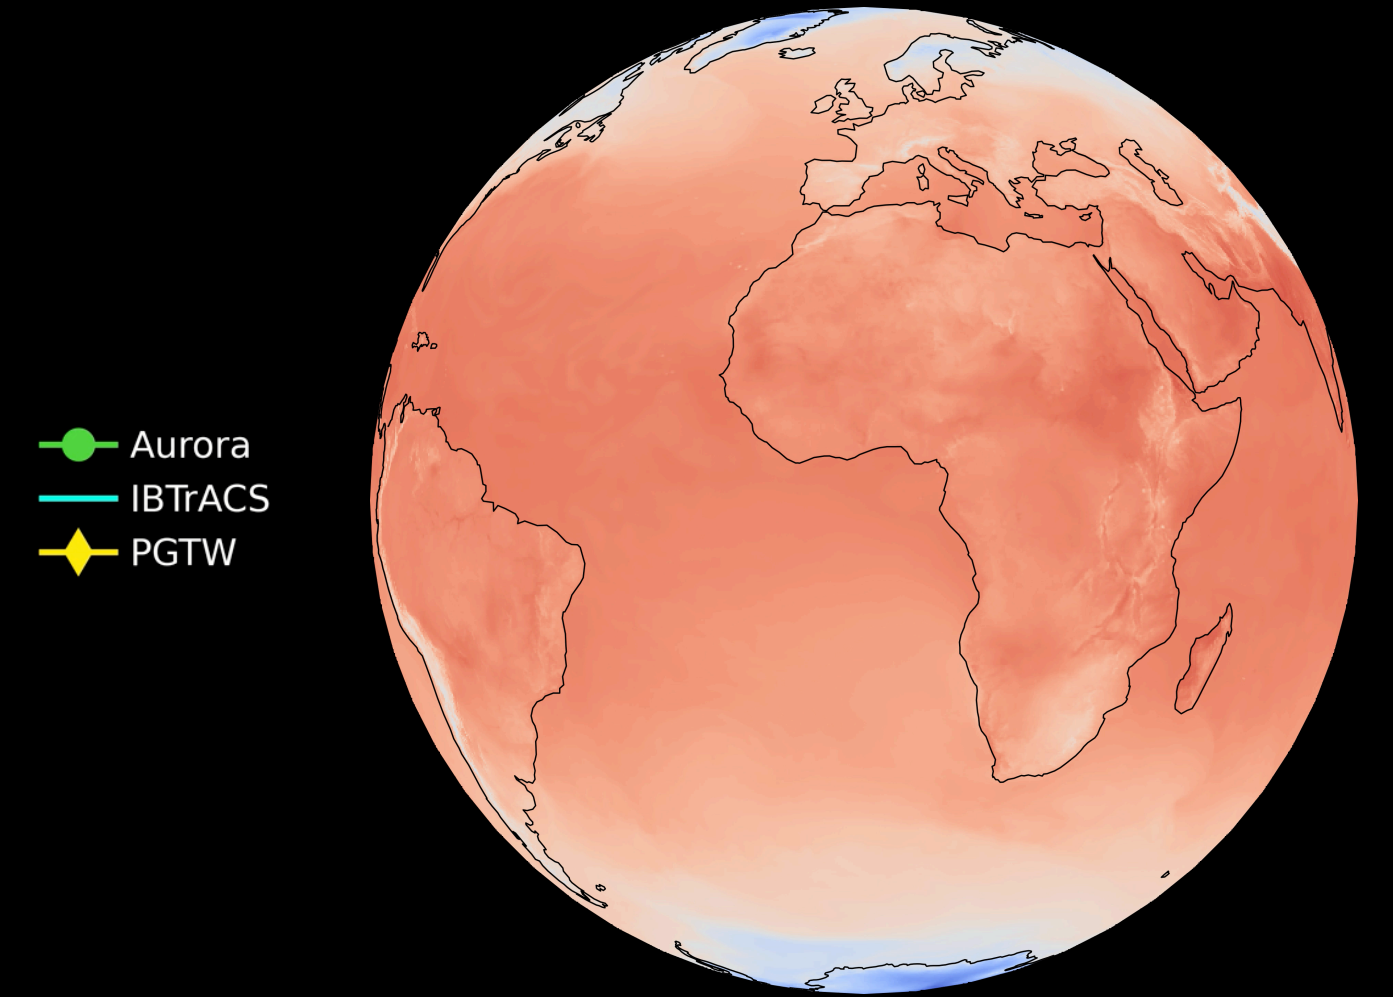

Atmospheric comp.  
and air pollution

Ocean  
waves

Tropical cyclone  
track

High-resolution  
weather

# Aurora

## Air Pollution Forecasting

- **Setup:** model levels of  $\text{PM}_{10}$ ,  $\text{PM}_{2.5}$ ,  $\text{PM}_{10}$ , CO, NO,  $\text{NO}_2$ ,  $\text{SO}_2$ ,  $\text{O}_3$
- **Data:** Copernicus Atmospheric Monitoring Service (CAMS) analysis
- **Baseline:** CAMS forecasts

Coupled to IFS, ~10x more expensive:  
**~16 node-hours per hour lead time!**

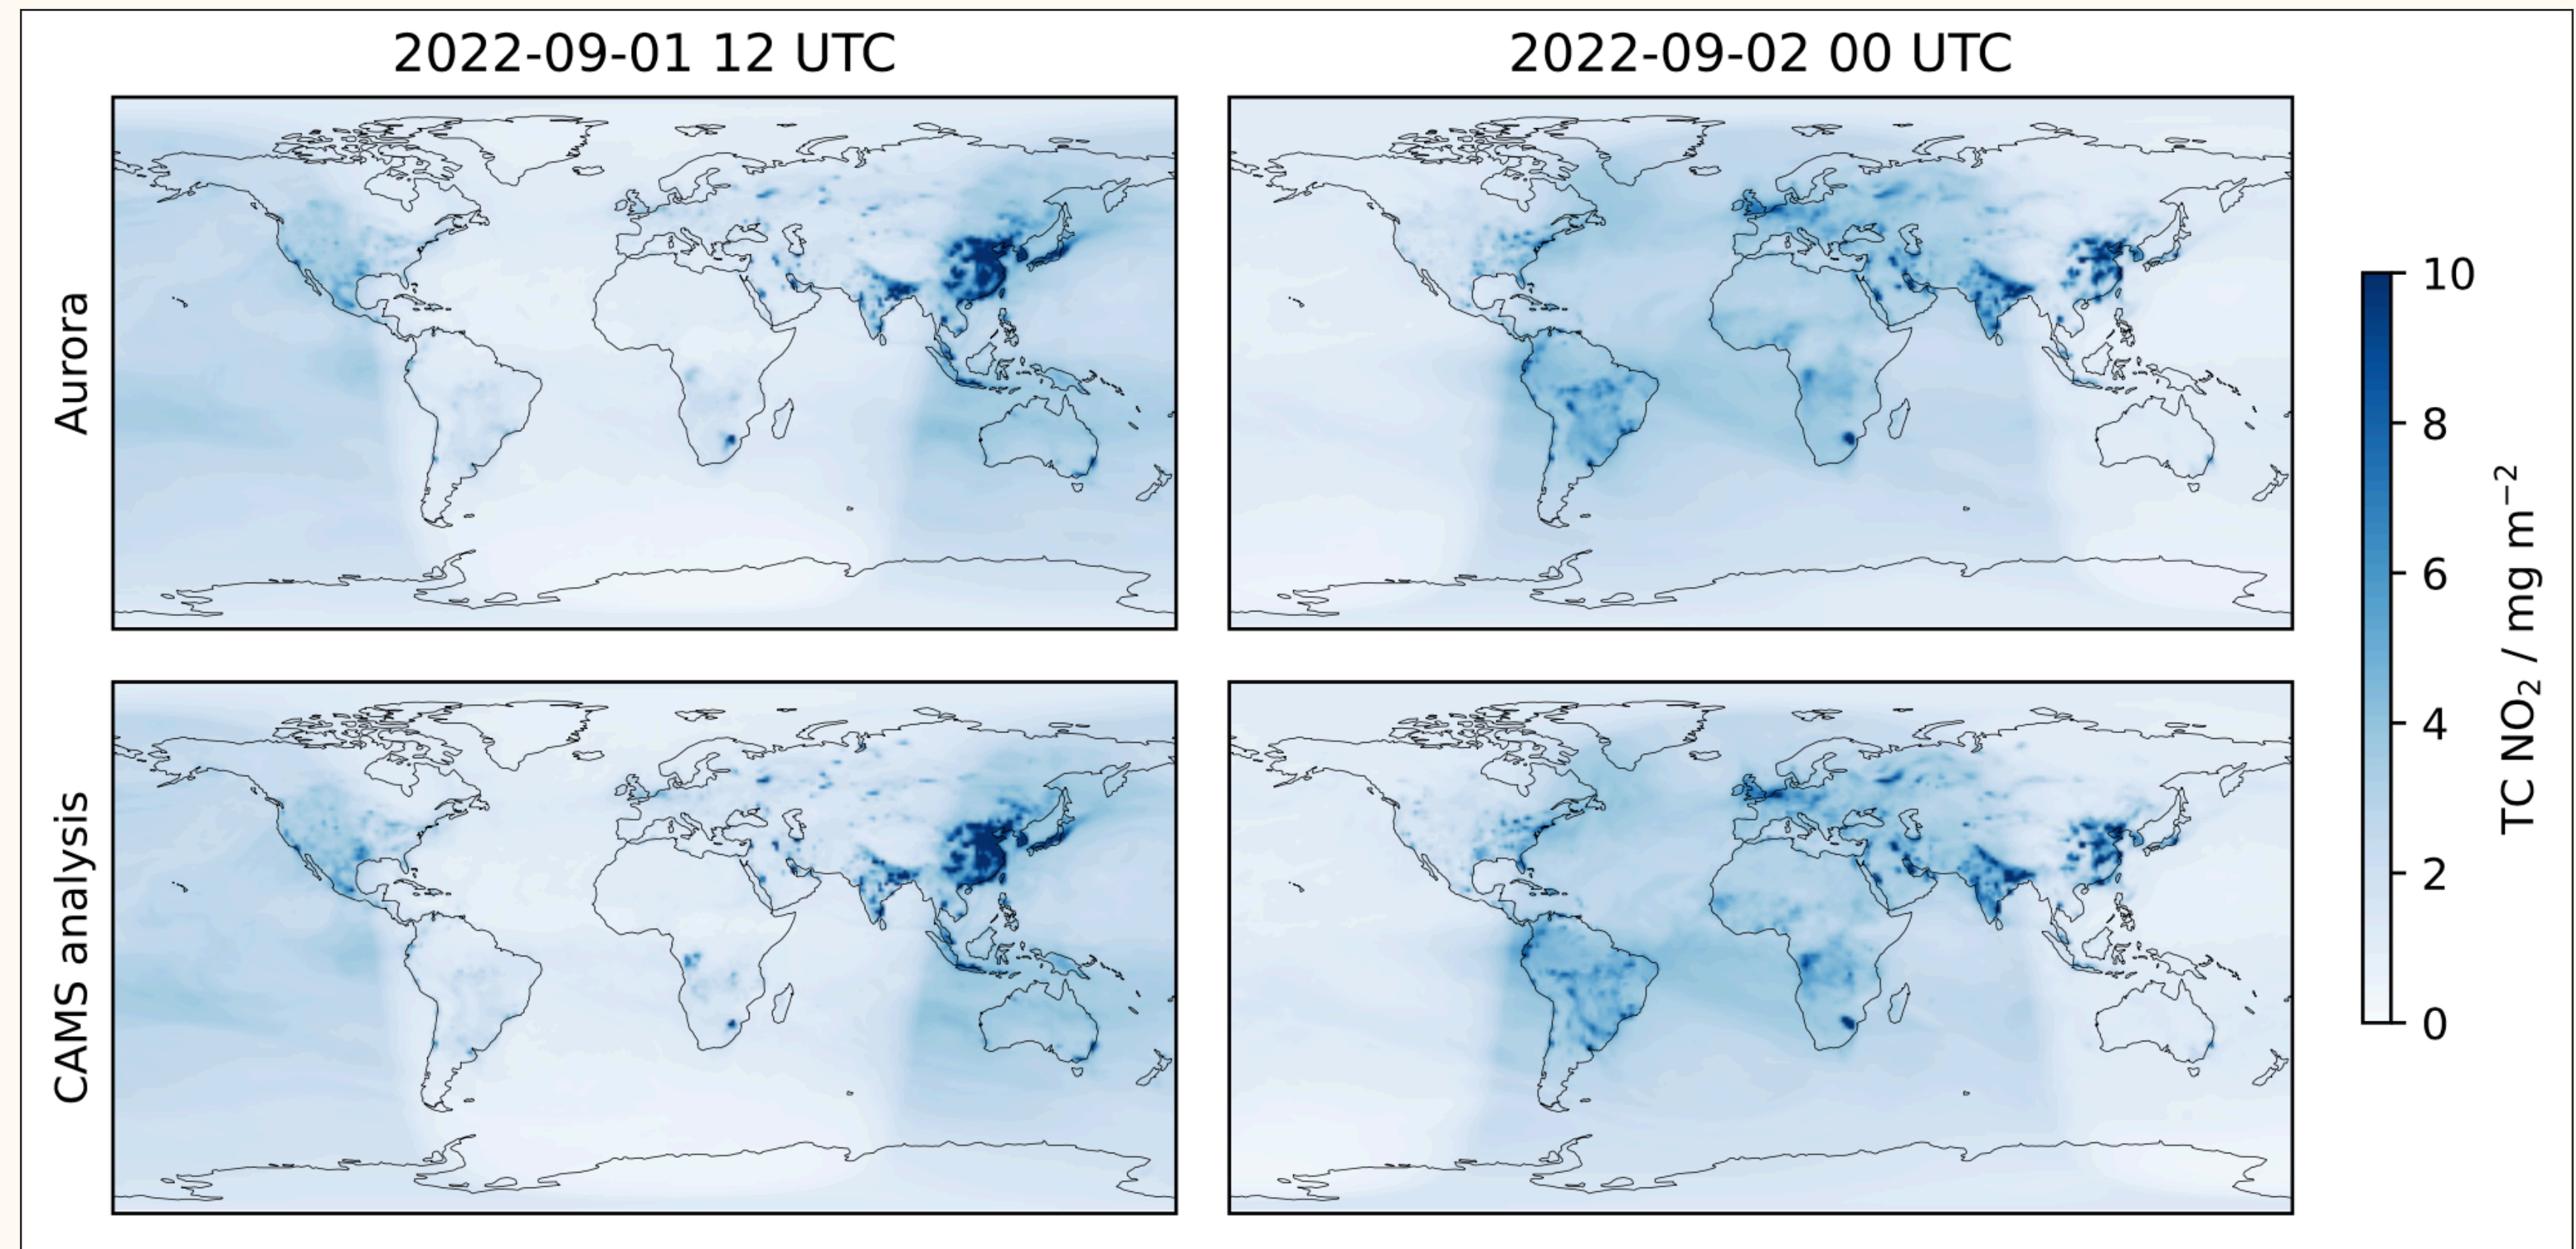

Aurora: **~0.5 s per hour lead time**

# Aurora

## Air Pollution Forecasting (2)

- Heterogeneous and spikey
- Anthropogenic factors
- Scarce
- Non-stationary

## Overall:

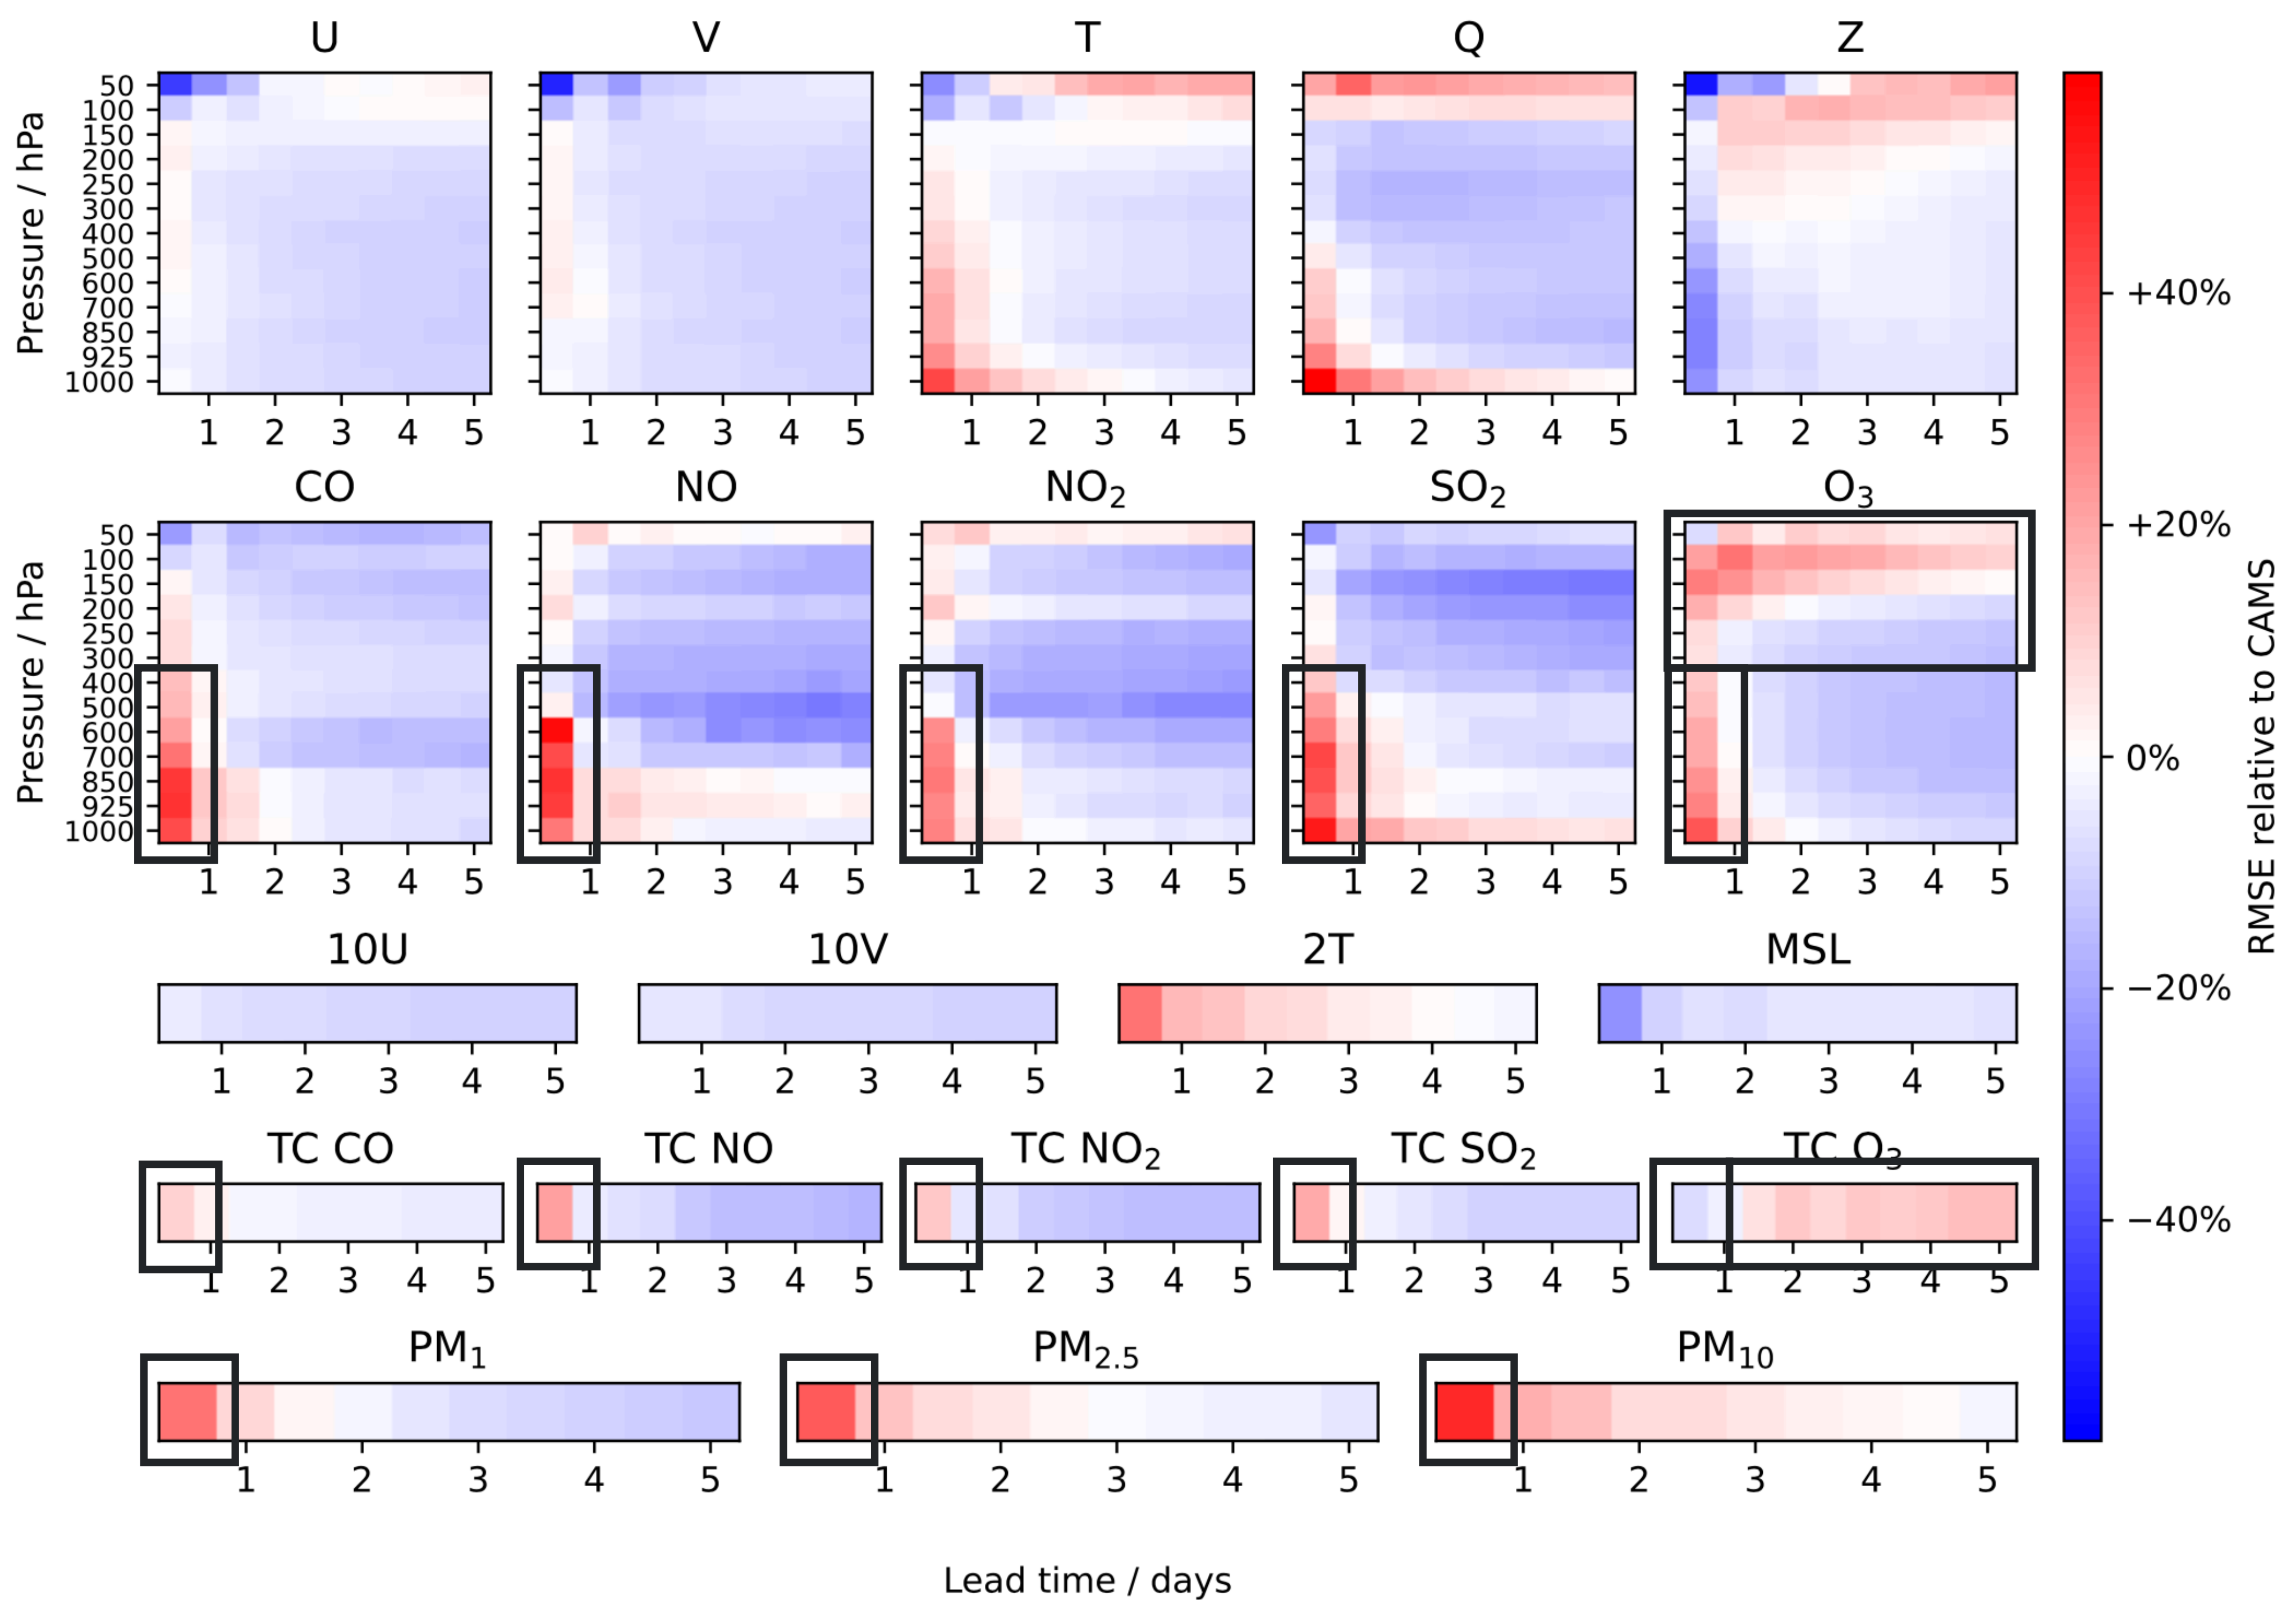

Competitive on  
95%  
( $\leq 20\%$  RMSE)

Better on 75%

## Three days:

Competitive on  
100%  
( $\leq 20\%$  RMSE)

Better on 86%

# Conclusion

- Medium-term weather forecasting has seen incredible progress
- **Pretraining–fine-tuning paradigm** to extend these advancements to other domains
- Aurora only scratches the surface!
